Chapter 1

BMP280/BME280 sensor library for Arduino

This is a BMP280/BME280 temperature/pressure/humidity sensor library for Arduino.

Arduino library features

- Measurements:
 - BMP280: Temperature / pressure / approximate altitude
 - BME280: Temperature / pressure / approximate altitude / humidity
- Three operation modes:
 - Normal mode: Continues conversion
 - Forced mode: One-time conversion
 - Standby mode: Low-power, no conversion
- Sampling configuration
- Chip detect / read chip ID
- I2C interface only
- Small flash/RAM footprint

BMP280/BME280 sensor specifications

- Operating voltage: 1.71V .. 3.6V max
- Low current:
 - 1.8 uA @ 1 Hz humidity and temperature
 - 2.8 uA @ 1 Hz pressure and temperature
 - 3.6 uA @ 1 Hz humidity, pressure and temperature
 - 0.1 uA in sleep mode
- Operating range: -40...+85 °C, 0...100 % rel. humidity, 300...1100 hPa
- I2C bus interface: max 3.4 MHz
- No additional electronic components needed

Hardware

Connection Arduino board - BMX280 sensor

Pins board - BMX280	VCC	GND	SDA	SCL
Arduino UNO (ATMega328 boards)	5V	GND	A4	A5
Arduino Mega2560	5V	GND	D20	D21
Arduino Leonardo	5V	GND	D2	D3
Arduino DUE (ATSAM3X8E)	3V3	GND	20	21
ESP8266	3V3	GND	GPIO4 (D2)	GPIO5 (D1)
ESP32	3V3	GND	GPIO21	GPIO22

Other unlisted MCU's may work, but are not tested.

Examples

Examples | Erriez BMP280/BME280 sensor:

- [ErriezBMX280](#)

Documentation

- [Doxygen online HTML](#)
- [Doxygen PDF](#)
- [BMP280 chip datasheet](#)
- [BME280 chip datasheet](#)

Example

```
{c++}
#include <Wire.h>
#include <ErriezBMX280.h>

// Adjust sea level for altitude calculation
#define SEA_LEVEL_PRESSURE_HPA 1026.25

// Create BMX280 object I2C address 0x76 or 0x77
ErriezBMX280 bmx280 = ErriezBMX280(0x76);

void setup()
{
    // Initialize serial
    delay(500);
    Serial.begin(115200);
    while (!Serial) {
        ;
    }
    Serial.println(F("\nErriez BMP280/BMX280 example"));

    // Initialize I2C bus
    Wire.begin();
    Wire.setClock(400000);

    // Initialize sensor
    while (!bmx280.begin()) {
        Serial.println(F("Error: Could not detect sensor"));
        delay(3000);
    }

    // Print sensor type
    Serial.print(F("\nSensor type: "));
    switch (bmx280.getChipID()) {
        case CHIP_ID_BMP280:
```

```

        Serial.println(F("BMP280\n"));
        break;
    case CHIP_ID_BME280:
        Serial.println(F("BME280\n"));
        break;
    default:
        Serial.println(F("Unknown\n"));
        break;
    }
}

void loop()
{
    Serial.print(F("Temperature: "));
    Serial.print(bmx280.readTemperature());
    Serial.println(" C");

    if (bmx280.getChipID() == CHIP_ID_BME280) {
        Serial.print(F("Humidity: "));
        Serial.print(bmx280.readHumidity());
        Serial.println(" %");
    }

    Serial.print(F("Pressure: "));
    Serial.print(bmx280.readPressure() / 100.0F);
    Serial.println(" hPa");

    Serial.print(F("Altitude: "));
    Serial.print(bmx280.readAltitude(SEA_LEVEL_PRESSURE_HPA));
    Serial.println(" m");

    Serial.println();

    delay(1000);
}

```

Output

```

{c++}
Erriez BMP280/BMX280 example

Sensor type: BME280

Temperature: 28.50 C
Humidity:    45.13 %
Pressure:    1024.88 hPa
Altitude:    11.27 m

Temperature: 28.55 C
Humidity:    45.21 %
Pressure:    1024.89 hPa
Altitude:    11.21 m

...

```

Set sampling

The sensor sampling and mode can be configured with function `setSampling()`. Recommended modes of operation according to the datasheet chapter "Recommended modes of operation":

```

{c++}
// Set sampling
//
// Weather
// - forced mode, 1 sample / minute
// - pressure x1, temperature x1, humidity x1
// - filter off
//
// Humidity sensing
// - forced mode, 1 sample / second
// - pressure x0, temperature x1, humidity x1
// - filter off
//
// Indoor navigation
// - normal mode, t standby = 0.5 ms
// - pressure x16, temperature x2, humidity x1
// - filter coefficient 16

```

```
//  
// Gaming  
// - forced mode, t standby = 0.5 ms  
// - pressure x1, temperature x1, humidity x1  
// - filter off  
bmx280.setSampling(BMX280_MODE_NORMAL,    // SLEEP, FORCED, NORMAL  
                  BMX280_SAMPLING_X16,    // Temp: NONE, X1, X2, X4, X8, X16  
                  BMX280_SAMPLING_X16,    // Press: NONE, X1, X2, X4, X8, X16  
                  BMX280_SAMPLING_X16,    // Hum:  NONE, X1, X2, X4, X8, X16 (BME280)  
                  BMX280_FILTER_X16,      // OFF, X2, X4, X8, X16  
                  BMX280_STANDBY_MS_500); // 0_5, 10, 20, 62_5, 125, 250, 500, 1000
```

Public Member Functions

- [ErriezBMX280](#) (uint8_t i2cAddr)
Constructor.
- bool [begin](#) ()
Sensor initialization.
- uint8_t [getChipID](#) ()
Get chip ID.
- float [readTemperature](#) ()
Read temperature.
- float [readPressure](#) ()
Read pressure.
- float [readAltitude](#) (float seaLevel)
Read approximate altitude.
- float [readHumidity](#) ()
Read humidity (BME280 only)
- void [setSampling](#) (BMX280_Mode_e mode=BMX280_MODE_NORMAL, BMX280_Sampling_e tempSampling=BMX280_SAMPLING_X16, BMX280_Sampling_e pressSampling=BMX280_SAMPLING_X16, BMX280_Sampling_e humSampling=BMX280_SAMPLING_X16, BMX280_Filter_e filter=BMX280_FILTER_OFF, BMX280_Standby_e standbyDuration=BMX280_STANDBY_MS_0_5)
Set sampling registers.
- uint8_t [read8](#) (uint8_t reg)
Read from 8-bit register.
- uint16_t [read16](#) (uint8_t reg)
Read from 16-bit register.
- uint16_t [read16_LE](#) (uint8_t reg)
Read from 16-bit unsigned register little endian.
- int16_t [readS16_LE](#) (uint8_t reg)
Read from 16-bit signed register little endian.
- uint32_t [read24](#) (uint8_t reg)
Read from 24-bit register.
- void [write8](#) (uint8_t reg, uint8_t value)
Write to 8-bit register.

4.1.1 Detailed Description

BMX280 class.

Definition at line 134 of file ErriezBMX280.h.

4.1.2 Constructor & Destructor Documentation

4.1.2.1 ErriezBMX280()

```
ErriezBMX280::ErriezBMX280 (
    uint8_t i2cAddr )
```

Constructor.

Parameters

<i>i2cAddr</i>	I2C address
----------------	-------------

Definition at line 43 of file ErriezBMX280.cpp.

4.1.3 Member Function Documentation

4.1.3.1 begin()

```
bool ErriezBMX280::begin ( )
```

Sensor initialization.

Return values

<i>true</i>	BMP280 or BME280 sensor detected
<i>false</i>	Error: No (supported) sensor detected

Definition at line 55 of file ErriezBMX280.cpp.

4.1.3.2 getChipID()

```
uint8_t ErriezBMX280::getChipID ( )
```

Get chip ID.

Returns

Chip ID as read with [begin\(\)](#)

Definition at line 93 of file ErriezBMX280.cpp.

4.1.3.3 read16()

```
uint16_t ErriezBMX280::read16 (
    uint8_t reg )
```

Read from 16-bit register.

Parameters

<i>reg</i>	Register address
------------	------------------

Returns

16-bit register value

Definition at line 357 of file ErriezBMX280.cpp.

4.1.3.4 read16_LE()

```
uint16_t ErriezBMX280::read16_LE (
    uint8_t reg )
```

Read from 16-bit unsigned register little endian.

Parameters

<i>reg</i>	Register address
------------	------------------

Returns

16-bit unsigned register value in little endian

Definition at line 329 of file ErriezBMX280.cpp.

4.1.3.5 read24()

```
uint32_t ErriezBMX280::read24 (
    uint8_t reg )
```

Read from 24-bit register.

Parameters

<i>reg</i>	Register address
------------	------------------

Returns

24-bit register value

Definition at line 375 of file ErriezBMX280.cpp.

4.1.3.6 read8()

```
uint8_t ErriezBMX280::read8 (
    uint8_t reg )
```

Read from 8-bit register.

Parameters

<i>reg</i>	Register address
------------	------------------

Returns

8-bit register value

Definition at line 296 of file ErriezBMX280.cpp.

4.1.3.7 readAltitude()

```
float ErriezBMX280::readAltitude (
    float seaLevel )
```

Read approximate altitude.

Parameters

<i>seaLevel</i>	Sea level in hPa
-----------------	------------------

Returns

Altitude (float)

Definition at line 174 of file ErriezBMX280.cpp.

4.1.3.8 readHumidity()

```
float ErriezBMX280::readHumidity ( )
```

Read humidity (BME280 only)

Returns

Humidity (float)

Definition at line 187 of file ErriezBMX280.cpp.

4.1.3.9 readPressure()

```
float ErriezBMX280::readPressure ( )
```

Read pressure.

Returns

Pressure (float)

Definition at line 132 of file ErriezBMX280.cpp.

4.1.3.10 readS16_LE()

```
int16_t ErriezBMX280::readS16_LE (
    uint8_t reg )
```

Read from 16-bit signed register little endian.

Parameters

<i>reg</i>	Register address
------------	------------------

Returns

16-bit signed register value in little endian

Definition at line 345 of file ErriezBMX280.cpp.

4.1.3.11 readTemperature()

```
float ErriezBMX280::readTemperature ( )
```

Read temperature.

Returns

Temperature (float)

Definition at line 104 of file ErriezBMX280.cpp.

4.1.3.12 setSampling()

```
void ErriezBMX280::setSampling (
    BMX280_Mode_e mode = BMX280_MODE_NORMAL,
    BMX280_Sampling_e tempSampling = BMX280_SAMPLING_X16,
    BMX280_Sampling_e pressSampling = BMX280_SAMPLING_X16,
    BMX280_Sampling_e humSampling = BMX280_SAMPLING_X16,
    BMX280_Filter_e filter = BMX280_FILTER_OFF,
    BMX280_Standby_e standbyDuration = BMX280_STANDBY_MS_0_5 )
```

Set sampling registers.

Parameters

<i>mode</i>	See BMX280_Mode_e
<i>tempSampling</i>	See BMX280_Sampling_e
<i>pressSampling</i>	See BMX280_Sampling_e
<i>humSampling</i>	See BMX280_Sampling_e
<i>filter</i>	See BMX280_Filter_e
<i>standbyDuration</i>	See BMX280_Standby_e

Definition at line 269 of file ErriezBMX280.cpp.

4.1.3.13 write8()

```
void ErriezBMX280::write8 (
    uint8_t reg,
    uint8_t value )
```

Write to 8-bit register.

Parameters

<i>reg</i>	Register address
<i>value</i>	8-bit register value

Definition at line 314 of file ErriezBMX280.cpp.
